✓ **Route Observation & Reporting**

✓ **MRF Process Documentation**

New Software Lets Companies Slash Insurance Premiums
Instant Tracking and Reporting Make the Difference

Specialty Solid Waste & Recycling, of Sunnyvale, California, was concerned about rising insurance costs and inadequate reporting from the field. Their traditional pencil-and-paper approach wasn't working. They investigated alternatives and discovered a new tracking software training solution from OmnisTools.

"OmnisTools software safety training promotes 1:1 communication between our supervisors and employees," says General Manager Jerry Nabhan. "It has lowered our insurance premiums by 30 percent. We are now able to keep our drivers safer and prevent future injury and cost to our company. Our data is stored in the cloud, which allows our supervisors to retrieve our data from out in the field anywhere, anytime. As a result, communication is better and we are more efficient."

Operations Manager Rebecca Buldo adds, "OmnisTools makes our company more responsive to customer needs by enabling field supervisors to take pictures of any issue, then email them back to our customer service reps in the office, for a quick resolution. Reducing delays and fines is critical. This tracking process improves the collection process and customer satisfaction.

Another company, Garden City Sanitation, based in San Jose, California, is also seeing significant benefits with OmnisTools software. Says David Calegari , Operations Manager at Garden City, "OmnisTools Software provides accountability to supervisors out in the field. It has helped us keep our costs down and sustainable."

The software is simple and easy to use, Mr. Calegari says. "Communication with supervisors, employees, and management has significantly improved, and past information is easy to access from anywhere. OmnisTools also helps document work for safety compliance."

Auto Fleet Record Keeping

Route Observation and Reporting

Pre-Trip and Post-Trip Inspections—Do your drivers always perform pre-trip and post-trip inspections? Are they "pencil-whipping" the DVIR form? Are they inspecting the truck thoroughly to identify problems before they hit the road? OmnisTools software is the solution.

- Driver completes DVIR form on a tablet, shooting video while walking around his truck, saves it on the Omnis Secure Cloud Server, which is date/time stamped.
- Prevents pencil-whipping, driver is fully accountable, real-time pre/post trip documentation.
- Retrieve pre/post trip reports for investigation and compliance.

Supervisors have a complete tool to observe drivers in the field. Run reports for all route observations by truck, driver, route, or key words such as "cell phone." This provides leading indicators of areas for driver improvement.

- Pull up 1:1 observation tracking form on your tablet, quickly check mark and note what the supervisor observed in the field.
- Observation tracking form is date/time stamped with photos or video.
- Stored in OmnisTools Secure Cloud Server.

Track, document, report, correct. Easily and Instantly.

Materials Recovery Facility (MRF)

OSHA Lockout /Tagout. Employees can easily track lockout/tagout and maintenance on a short checklist. When work is completed, the report is stored in the OmnisTools Secure Cloud Server with date and time. Management can run reports for OSHA inspections and safety.

Supervisors can document, track, and save date/time stamped observations in the MRF. Take photos, write and save 1:1 observation notes. Run reports by date, time, employee, or key words like "needles" to alert management to any problems.

- Track and document maintenance.
- Track and document equipment breakdowns.
- Send a "dashboard" to management to order supplies and report problems.
- Improves efficiency, moral, and communication.
